

Kramden's mission is to empower hardworking, less-advantaged students by giving them home computers, allowing them to bridge the digital divide and advance their achievement, strengthening their contribution to the community. We do this by collecting, refurbishing, and reusing computers, extending their useful lives.

Kramden has two additional goals of refurbishing computers at a cost of \$65 or less per computer and converting at least 65 recipients of computers into volunteers. Kramden will provide an update on the cost goal later this year. To date one recipient of a computer has become a volunteer

Kramden Commentary: We hosted 3 Mini Geek-A-Thons at our office in Durham and awarded 649 computers.
